Govern collections decisions, not just the delinquency list.

We turn operational experience into decisions.

OPERATIQ is an operational intelligence layer that interprets historical behavior, prioritizes the portfolio and recommends the next best action with reasons, evidence and traceability. It complements your systems; it does not replace the collector or the core.

Key capabilities

- Behavior-based collections decisioning, not just days past due.
- Next best action per account, with supporting reasons and evidence.
- Versioned, auditable and governable decision logic.

Available on Microsoft Marketplace

https://marketplace.microsoft.com/en-us/product/saas/grupo-fenrir.operatiq-platform

Portfolio figures are a commercial fair-use reference, not a hard technical limit. Complements your core, CRM, BI and DWH; it does not replace them.

OPERATIQ complements existing systems and processes. It does not guarantee specific financial outcomes or replace institutional controls and decisions. Availability on Microsoft Marketplace does not imply Microsoft endorsement or certification.
